Eisenhower Matrix - Weather Outfit Advisor

	Urgent	Not Urgent
Important	● User enters start and end time outdoors ● • Fetch today's hourly temp and weather from the API ● • Detect rain/snow or big temp changes during that window ● • Recommend an outfit with simple fixed rules ● • Alert user about bad weather and show the outfit	● Read class schedule automatically instead of typing in times ● Let the user set their own location ● Personalized outfits (runs hot/cold, clothes they own) ● Morning notification instead of running the program manually
Not Important	● HTTP requests to the weather API (Java HttpClient) ● JSON parsing of the forecast (Gson or Jackson) ● Date/time handling (java.time) ● Turning a city name into coordinates (geocoding API)	● AI-generated outfit pictures ● Sharing outfits on social • media ● 7-day forecast view ● Full mobile app
